Example short article

Good Loops (www.good-loops.com) introduces Guitar Kitchen Vol. 1 - a sample library of acoustic guitar loops of 9 songs.

Guitar Kitchen focuses on singer-songwriter style music and allows composers, producers and even music supervisors to quickly experiment with ideas. This library is meant to get your creative juices flowing, test musical concepts or generally let yourself fall into a mood.

Guitar Kitchen features 9 songs of beautifully recorded and charmingly performed acoustic guitar loops and samples. Each song is split up into its sections (intro, verse, chorus, bridge) and each section consists of up to 3 different parts. This allows you, the producer or composer to quickly create a complete song and retain all the performance particularities of the acoustic guitar: all the natural transitions between the chords are still there and the sections get progressively more intense towards the end of the song to allow a dynamic feel to the music.

Guitar Kitchen is offered as audio files in Apple Loops and ACIDized .WAV format, in Propellerheads .rx2 format as well as a Native Instruments Kontakt 5 library (require full version of Kontakt 5). Each format has its own advantages with the Kontakt version being the most flexible.

The Kontakt version of the library automatically syncs to your song tempo and features transpose keyswitches and single bar loops in many variations of every chord in the song.

Key features

- 2 selectable microphone tracks per loop
- all natural chord transitions specific to guitar playing
- recordings of entire sections instead of per chord
- keyswitching to transpose the loops
